SKILLS

- **Programming Languages:** Python, TypeScript, C++, Java, SQL, Shell
- **Frameworks & Libraries:** React, Node, Flask, Django, FastAPI, Spring Boot, Plotly, Dash, NumPy, Pandas, Qt, Next.
- **DevOps & Systems:** AWS (S3, EC2, EBS, Lambda), Docker, Kubernetes, Terraform, CI/CD, OAuth 2.0, Jenkins, Git, Jira, Kafka, REST, DSA, System Design, Distributed Systems
- **Database & AI/ML:** SQL, MongoDB, Redis, Dynamo, ML, NLP, LLM, RAG
- **AI Tools & Agentic Coding:** Claude Code, GitHub Copilot, Cursor, Cline, OpenAI Codex, MCP

EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                   |

| <div><div>DevAssist AI (LLM, Code Generation)</div><div><div>• Built DevAssist AI, a VS Code extension leveraging multiple LLMs for prompt-based code generation, reducing coding effort by 30%. Designed tools like Read/Write File and Execute Command for real-time editing and debugging.</div><div>• Created a chatbot UI for user inputs, enabling seamless interaction with LLMs. Integrated specialized tools like Ask Follow-up Question and List Files, standardizing LLM responses for efficient real-time code editing.</div></div></div> | <div>Dec 2024</div> |
| <div><div>Bugs Classification (NLP, Machine Learning, Neural Networks)</div><div><div>• Developed a bug classification system using NLP techniques, integrating TF-IDF with Naive Bayes and Random Forest, achieving 10% higher accuracy than Word2Vec with MLP.</div><div>• Utilized pretrained LLMs like BERT, fine-tuned on the bug dataset, resulting in the best accuracy of 88% for bug categorization.</div></div></div>                                                                                                                       | <div>Apr 2024</div> |

AWARDS

- Received the ‘One Intel and Result Driven’ title for exceptional DevOps contributions. (October 2022)
- Quarterly Innovation award for the Metrics Dashboard project in MetricStream (July 2020)
- Received Best Project Award for developing an AI pair programmer as part of the Deep Learning course (Dec 2024)
